## **CHAPTER ONE: INTRODUCTION**

### Background

Cognizant of the huge benefit and positive impact of digital health information system for the health sector, the ministry of health of Ethiopia (FMoH) clearly identified digital transformation and digital health governance as the two major pillars of the health sector transformation plan(HSTP II, 2020-2025).

Based on the HSTP, the ministry has also developed the information revolution road map which aims "to maximize the availability, accessibility, quality, and use of health information for decision making processes through the appropriate use of ICTs to positively impact the access, quality, and equity of healthcare delivery at all levels"

Implementing HIS is a resource intensive engagement and hence developing countries like Ethiopia should wisely implement these systems with priority based approach and devise a mechanism to regularly assess if these systems are performing as per their objectives and take managed actions to rectify problematic areas.

There should also be coordinated effort among all relevant stakeholders in the sector to identify the HIS priority areas which are aligned with the sector's strategic objectives to take advantage of the continuous advancement of information and communication technology (ICT).

The digital health should be adaptive and continuously evolving which enables stakeholders to clearly identify strengths and improvement points, and accordingly prioritize what to do in order to reach higher performance states or maturity

The ministry is currently developing various ehealth implementation guiding documents like the digital health blueprint and digital health strategy. These initiatives require inputs from assessments which show the current status of HIS implementation and its strong and weak sides.

Nowadays, the importance of assessing the maturity level of health information systems using maturity model-based digital health assessment tools have grown. These methods are useful to

to describe current maturity level of digital health systems in terms of human resources, business processes, technology, and organizational capabilities. The methods also facilitate users' ability to set goals for future levels of maturity and inform the development of improvement plans to realize the next maturity level toward a stronger digital health system for a country to meet its public health targets. The HIS maturity assessment gives due emphasis to the institutional maturity of the information system in its entirety (based on the concept of HIS Stages of Continuous Improvement) as well as the maturity of individual HIS components and interoperability maturity of those systems. Based on the current maturity status of the HIS and where we want to reach in the future, the assessment results will give information about the areas which need special attention by the different stakeholders.

In recent years, lower and middle income countries (LMIC) like Ghana and Uganda are using the health system maturity assessment to ensure effective delivery of healthcare data, to avoid duplications, to ensure high quality of the data and modernize the decision making processes - and it is very helpful for the ministry of health (MOH) of Ethiopia too to implement the same. The maturity model concept helps MOH to measure its ability to continuously improve the HIS/Digital Health until it reaches the desired level of development or maturity. The greater the maturity, the stronger the system and the more likely it is to withstand interruptions, such as changes in staff, fluctuation in funds, changing data needs, or the effects of rapidly evolving technology. The HIS maturity model assesses the Health information system and addresses the components that are critical to achieve the desired level of maturity such as interoperability, technology, the broad area of leadership and governance of the HIS, and human resources. This assessment, therefore, was conducted with the aim of generating a solid evidence on the maturity status of HIS for MOH and its strategic partners by assessing the digital HIS's landscape in the country through identifying the existing capacity, processes, and structures and the required levels of maturity.

### **Rationale: Why this Assessment?**

The Ministry of health (MOH) along with its implementing partners has been implementing various digital health initiatives which aims to improve the access, quality and equity of health services. However, so far no attempt has been done to assess the status of the health information system as a whole in order to see where it stands and what are the major challenges with respect to HIS Leadership and Governance, HIS management and workforce, HIS information and communication technologies (ICT) infrastructure, HIS standards and interoperability, and Data quality and use.

Driven by the Information Revolution (IR) Agenda of the HSTP, FMOH is committed to ensure the availability of strong digital HIS in the country to achieve the strategic goals of the sector at federal and all applicable lower structures. This is not something MOH can ensure in one go, but it is a continuous improvement process that should be done incrementally and measured meticulously for its appropriateness. While a lot has already happened over the last few years regarding the implementation of different electronic HIS in the health system, the level of maturity of those systems and their level of interoperability hasn't been measured yet. That leaves MOH and its partners with very little or no evidence on where we are and what we need to do to get there. We need our electronic HIS diagnosed for their level of maturity – particularly stability of the systems components and their interoperability.

The HIS maturity assessment results can guide strategically linked continuous improvement processes. They are critical to obtaining a thorough understanding of MOH's current position and where it aims to be in the future. The maturity assessment enables to describe the process components that are believed to lead to better outputs and better outcomes. Obviously, a low level of maturity implies a lower probability of success in consistently meeting FMOH's IR objectives, and a higher level of maturity implies a higher probability of success. Such assessments can be a reference point for identifying the foundational elements needed to create an enabling environment for digital

HIS within a national HIS to become interoperable. If applied regularly, a maturity assessment results can drive improvements in an HIS, from current status to desired status. The results of such assessments can also serve as a roadmap for how to improve processes from one level to the next by helping to define the attributes of each level.

The digital HIS maturity assessment addresses three broad domains that are critical to HIS

interoperability: Leadership and Governance (Governance Structure, Interoperability Guidance Documents, Compliance with Data Exchange Standards, Data Ethics, HIS Interoperability Monitoring and Evaluation, Business Continuity, Financial Management, and Financial Resource Mobilization); Human Resources (Human Resources Policy, Human Resources Capacity - Skills and Numbers, and Human Resources Capacity Development ); and **Technology** (National HIS Enterprise Architecture, Technical Standards, Data Management, HIS Subsystems, Operations and Maintenance, communication Network, and Hardware). The maturity model is designed to describe the evolutionary path of increasingly organized and systematically more mature processes. One of the strengths of this assessment model is that FMOH, regions, or woredas can use the results to determine the status of their digital HIS towards their ability to capture and exchange data, and use them to determine the desired HIS interoperability status. In other words, even if FMOH is not in a position to make its systems interoperable yet, the assessment can still help us identify what processes, structures, and capacity we should be building within our digital HIS work to enable FMOH to pursue interoperability in the future. The model contains attributes that allow for the monitoring and measurement of progress along the path to maturity. Using desired goals as the ultimate maturity level, FMOH can assess the status of their HIS interoperability at any time, and identify how far we are from our goals. The assessment results can be important inputs for planning appropriate activities or actions to achieve the desired results.

### **Goal and Objectives of the Assessment**

Despite the strong commitment by the government towards HIS implementation and huge efforts done by various stakeholders to implement different digital health initiatives, there have been no coordinated effort made to assess the current status of the health information systems nationally and outline priority areas, set action items for improvement for better health outcomes.

The broader goal of this assessment is to measure the HIS maturity level based on major domains and subdomains by doing evaluation based on the HIS Stages of Continuous Improvement. In addition, the assessment shall put a clear roadmap for actions necessary to build a strong national HIS with attendant subsystems that are able to receive and share data (interoperable). By doing this, the assessment shall aim to identify the factors that are critical to achieving mature, interoperable HIS, and create a developmental path toward resilient systems.

The specific objectives of the assessment are the following:

- 1. To establish a systematic basis of measurement for describing HIS landscape in the sector by setting a baseline (2020) of HIS improvement in Ethiopia.
- 2. To set goals (2024) for all subcomponents of HIS to progress through HIS Stages of Continuous Improvement.
- 3. To set a roadmap toward resilient and interoperable systems, and prepare action plans for improvement.

# CHAPTER TWO: ASSESSMENT APPROACH

### Scope of the Assessment

This assessment is planned to deal with the overarching HIS maturity levels at national level based on the HIS domains and subdomains. Dealing with individual health information systems was not in the scope of this assessment. However, the HIS implemented and owned by the Ministry and Regional Health Bureaus were given due considerations during the rating exercise. Moreover, each domain was evaluated in light of the digital health enhancement efforts made from Service Delivery Points (SDPs) all the way to the national level.

### The Assessment Tool - SOCI

There are various HIS maturity assessment tools which have been developed to measure the HIS maturity level of countries. The basic principle is that such assessment tools should enable auditing and benchmarking; measuring progress against objectives and giving an understanding of strengths, weaknesses and opportunities which can support decision making concerning strategy and project portfolio management(Diogo Proença et.al,2018).

After doing a thorough landscape analysis of the existing maturity assessment tools, the FMoH has decided to use the Measure Evaluation Stages of continuous assessment (SOCI) tool which is more suitable to assess the national health information system of developing countries like Ethiopia.

The Stages of Continuous Improvement (SOCI) tool that was jointly developed by the United States Centers for Disease Control and Prevention (CDC), the Health Data Collaborative (HDC) Digital Health and Interoperability Working Group, and the USAID-funded MEASURE Evaluation (Updated, 2019) was used for this assessment. The tool measures current and desired HIS status in five HIS core domains across 13 components and 39 subcomponents. The status is measured across five stages: Emerging, Defined, Repeatable, Managed, and Optimized. This method draws from the maturity model

approach developed in the business and information technologies industries and initially used for quality improvements related to software. This stage model offers a relatively simple way of describing the progression toward higher capabilities in terms of process, people, technology, and organizational capabilities. Progression through each stage is characterized by defined metrics across the domains and components. Table 1 and Table 2 below will unpack the HIS Maturity Stages and the Domains and Components of SOCI.

| Stage              | Description  |
|--------------------|--|
| 1. Emerging/ad hoc | <ul> <li>Formal processes, capabilities, experience, or understanding of HIS issues/activities are limited or emerging</li> <li>Formal processes are not documented, and functional capabilities are at the development stage</li> <li>Success depends on individual effort</li> </ul>   |
| 2. Repeatable      | <ul> <li>Basic processes are in place based on previous activities or existing and accessible policies</li> <li>The need for standardized processes and automated functional capabilities is known</li> <li>There are efforts to document current processes</li> </ul>   |
| 3. Defined         | <ul> <li>There are approved, documented processes and guidelines tailored to HIS projects or activities</li> <li>There is increased collaboration and knowledge sharing</li> <li>Innovative methods and tools can be implemented and used to extend functional capabilities</li> </ul>   |
| 4. Managed         | <ul> <li>Activities are under control using established processes</li> <li>Requirements/goals have been developed, and a feedback process is in place to ensure that they are met</li> <li>Detailed measures for processes and products are being collected</li> </ul>   |
| 5. Optimized       | <ul> <li>Best practices are being applied, and the system is capable of learning and adapting</li> <li>The system uses experiences and feedback to correct problems and continuously improve processes and capabilities</li> <li>Future challenges are anticipated, and a plan is in place to address them through innovation and new technology</li> <li>Processes are in place to ensure review and incorporation of relevant innovations</li> </ul> |

Table 1: Description of the five stages of continuous improvement

#### Table 2: SOCI Core domains and components

| HIS Core Domain    | Components   | Subcomponents                   |
|--------------------|--------------|---------------------------------|
| HIS leadership and | HIS strategy | HIS strategic planning          |
| governance         |              | Monitoring and evaluation (M&E) |
|                    |              | plan                            |

|                            | Policy, legal, and regulatory | Existence of HIS policies and                    |
|----------------------------|-------------------------------|--|
|                            | framework, and compliance     | legislation                                      |
|                            |                               | Policy compliance enforcement                    |
|                            | HIS leadership and            | HIS leadership and coordination                  |
|                            | governance organizational     | HIS organizational structure and                 |
|                            | structures and functions      | function   |
| HIS management and         | HIS workforce capacity and    | HIS competencies (knowledge, skills,             |
| workforce                  | development                   | and abilities)                                   |
|                            | autorophient                  | HIS training and education (includes             |
|                            |                               | continual professional development)              |
|                            |                               |  |
|                            | Financial management          | HR policy  |
|                            | Financial management          | HIS financing plan                               |
|                            |                               | Resource mobilization                            |
| HIS information and        | Operations and                | Reliable power/electricity                       |
| communication technologies | maintenance                   | ICT business infrastructure                      |
| (ICT) infrastructure       |                               | Hardware   |
|                            | Communication network         | Networks and internet connectivity               |
|                            | (LAN and WAN)                 | ,  |
|                            | Business continuity           | Business continuity and processes                |
|                            | Dusiness continuity           | and policies                                     |
| HIS standards and          | Standards and guidelines      | HIS standard guidelines                          |
|                            | Standards and guidennes       |  |
| interoperability           |                               | Data set definitions (clinical and               |
|                            |                               | indicator)                                       |
|                            |                               | Data exchange standards                          |
|                            | HIS core services             | Master facility list                             |
|                            |                               | Indicator registry                               |
|                            |                               | Terminology management                           |
|                            |                               | Unique person identity management                |
|                            |                               | Enterprise architecture                          |
|                            | Interoperability (data        | Person data exchange                             |
|                            | exchange)                     | Aggregate data exchange                          |
|                            | exertainge)                   | Commodity management data                        |
|                            |                               | exchange   |
|                            |                               |  |
|                            |                               | Data security exchange                           |
| Data quality and use       | Data quality assurance        | Data quality assurance and quality               |
|                            |                               | control  |
|                            |                               | Data management                                  |
|                            | Data Use                      | Data use availability strategy                   |
|                            |                               | Information/data availability                    |
|                            |                               | Data use competencies                            |
|                            |                               | User/stakeholder engagement                      |
|                            |                               | Data synthesis and communication                 |
|                            |                               | Reporting and analytics features                 |
|                            |                               |  |
|                            |                               | Data use impact                                  |
|                            |                               | Data collection alignment with                   |
|                            |                               |  |

### Assessment Process:

Assessing a national health information system needs to be a collaborative process and expected to involve all the relevant stakeholders. It should also start by clearly defining the scope and intended objectives to be achieved.

The maturity assessment was done in two phases. The first one is the current status assessment and goal setting using the selected tool which is conducted from January 30 – February 2, 2021 in a workshop setup. The second phase was the Write up of the future state and improvement road map setting which is conducted from March 4-6, 2021.

Prior to that process ,the MOH followed the following key steps in conducting the maturity assessment.

- Step 1: Establishing the Assessment core team Team: MOH's Health Information Technology Directorate (HITD) and the Policy, Plan and M&E Directorate (PPMED) jointly led the HIS/Digital Health Maturity Assessment. Senior experts from the two directorates took the overall technical and administrative leadership in the entire processes.
- Step 2: Defining the Scope and Assessment Approach: Since there was not such kind of effort done so far to see the national HIS maturity status it was agreed that the current assessment should be able to measure the overarching HIS maturity level based on major domains and subdomains by doing evaluation based on the HIS Stages of Continuous Improvement (SOCI). Measuring maturity of the individual HIS components was lined up for next phase after completing this task.
- Step 3: Carry out Landscape Analysis and Document Reviews: The assessment leadership team conducted the landscape analysis of the available maturity assessment reports of different countries – and reviewed the approaches and tools the counties/projects used for the assessment. Moreover, the leadership team collected and organized the majority of the relevant references (documents) sitting at Ethiopia's MOH and/or partners' offices to facilitate evidence generation during the assessment.

Strategic Documents, publications and research papers, assessment reports/results which are published by the ministry, agencies under it and other relevant sector

organizations were analyzed and organized to be used as an input for the assessment.

**Step 4: Stakeholders mapping :** The assessment leadership team to include in this process all the relevant major stakeholders and engaged Directorates from the ministry, Agencies under the MOH, Regions (representatives); implementing & funding partners, and Universities which are incorporated in Capacity Building and Mentorship (CBMP) project.

Step 5: Organized a 4-day Assessment Workshop: The assessment workshop was conducted with participation of a total of 41 senior experts from identified stakeholders. THe, MOH opted for a hybrid of self- and facilitator-administered approach for the assessment. During the workshop, the current status and future state of the HIS maturity were defined - and the improvement roadmap was prepared. The assessment tool was explained for the participants and common understanding on the domains, components and subcomponents was reached after a thorough discussion.

Brief presentations were made on the five domain areas to grasp the major initiatives done so far and on the current activities made by different stakeholders in HIS implementation in the country

Handy templates and platforms were prepared to ease the scoring and evidence generation process.

• Step 6: Organized a Write-up Workshop: After gathering and organizing the assessment results obtained from the assessment workshop the write-up workshop was organized, organized to analyze the assessment results and do the write up on the future maturity states targeted on each component and subcomponents. An improvement roadmap was also outlined to reach the setted targets

# CHAPTER THREE: RESULTS OF THE HIS/DIGITAL HEALTH MATURITY ASSESMENT

# PART I: CURRENT MATURITY STATUS (AS IS – 2020)

### INTRODUCTION

Understanding the current status of the health information system will help policy makers, planners and implementers to understand the strength and weakness of the system so that the strong sides are maintained and concrete actions can be taken so that the weak sides are ameliorated.

The SOCI tool helps to measure HIS current status and expected HIS performance for achieving health goals over progreesive stages. It helps to characterize the HIS subcomponents and provides their details, in relation to health sector strategic goals.

The result of the current status of the five domain areas, thier components and subcomponents are presented in the next section

# Leadership and Governance - CURRENT STATUS (AS IS - 2020)

Leadership and governance as one of the six interrelated health systems building blocks, ensures HIS strategic policy, legal and regulatory framework for compliance and accountability. To this end, the Leadership and Governance domain deals with improving the impact of quality deliverables and organizational efficiency towards building strong governance on data quality, data management, data sharing, and use, privacy and security, and business process continuity.

The domain is also expected to deliver operational certainty and stability focusing on HSTP- II goals which are crucial in terms of improving the endorsement of policies, legislation, strategies for eHealth and HIS, the alignment and implementation of M&E plan, the definition of the organizational structure, coordination, and functions of HIS, and setting the mechanism for HIS compliance, and law enforcement. While promising efforts are already there regarding drafting workable documents, engaging stakeholders,

establishing technical and administrative committees, etc, the sector still will have to strive to improve particular areas like endorsing draft documents, defining the career path, revising the HIS structure, and budgeting the M&E activities. The following matrix will provide some decent details regarding where the Ethiopian Health Sector is - as far as Leadership and Governance is concerned.

| Domain Name        | HIS Leadership and Governance   |  |
|--------------------|---|--|
| Current Cumulative | 2.47 out of 5   |  |
| Score              | <ul> <li>Areas of Strength</li> <li>HIS strategy(HIS strategic planning)</li> <li>The HIS strategic plan prepared in the context of the health priorities of the country,</li> <li>The strategy has a vision for management and use of health information (electronic or other),</li> <li>Contains a plan of action for delivering the vision, and arrangements for M&amp;E.</li> <li>have a draft digital Health strategy</li> </ul> | <ul> <li>Major Gaps and Loopholes(check gaps against the tool)</li> <li>HIS strategy(HIS strategic planning)</li> <li>Documented strategies for each (eHealth and HIS) are not endorsed.</li> <li>It lacks wider stakeholders/ partners involvement</li> <li>The HIS strategy is at the draft stage</li> <li>HIS strategyImplementation is not monitored, and there is no schedule for it</li> </ul>                     |
|                    | <ul> <li>M&amp;E Plan</li> <li>A draft framework prepared for<br/>regular evaluation (both formative<br/>and summative) of HIS activities</li> <li>The M&amp;E plan is aligned with the<br/>HSTP</li> <li>Regularly reviewed</li> <li>Have health and health-related<br/>dissemination platform</li> </ul>  | <ul> <li>M&amp;E Plan</li> <li>alignment of HIS activities are not insured with HIS strategy</li> <li>M&amp;E is not fully implemented, budgeted, not consistent, not scheduled to capture the desired impact on service delivery, health-related research.</li> <li>The M&amp;E lacks check and balance across all HIS systems</li> </ul>   |
|                    | <ul> <li>Existence of HIS policies and<br/>legislation</li> <li>There are drafts of HIS policies<br/>and legislation that guide<br/>decisions &amp; achieve HIS<br/>outcomes.</li> <li>Policy compliance enforcement</li> <li>There are specific enforcing<br/>mechanisms in some settings.<br/>For example, data sharing<br/>policies in EPHI.</li> </ul>  | <ul> <li>Policy, legal, and regulatory<br/>framework and compliance</li> <li>Existence of HIS policies and<br/>legislation</li> <li>All documents are not updated<br/>and endorsed and<br/>lack to oversee adherence to<br/>procedures and policies</li> <li>It lacks wider stakeholder<br/>engagement in the preparation of<br/>documents</li> <li>Duplication of policies and<br/>legislations example Data</li> </ul> |

| <ul> <li>Organizational structures and functions</li> <li>HIS leadership and coordination</li> <li>Have established technical and administrative committee such as NAG, TWG, PMT, IR steering committee</li> <li>Had a meeting on the different committee such as JSC(Ministry with regional health bureau heads) to address political issues and manage national HIS affairs at all levels of a country's health system</li> <li>The governance structure consists of the mechanisms, processes, and institutions through which actors and stakeholders articulate their interests, by defining the roles and responsibilities with meeting schedule</li> </ul> | <ul> <li>sharing policy drafted by EPHI,<br/>MOH, Partners</li> <li>The policies developed are not<br/>comprehensive and results in a<br/>damaged reputation and<br/>weakened competitive position</li> <li>No national policies addressing<br/>data standards and<br/>interoperability, privacy and<br/>security, information and<br/>communication technologies<br/>(ICT) infrastructure, data<br/>stewardship, and data use<br/>agreements are widely available,<br/>used, and integrated in strategic<br/>HIS/health planning, and<br/>compliance is monitored by the<br/>designated government<br/>department/unit.</li> </ul>   |

| <ul> <li>facilitates the implementation of<br/>HIS strategy.</li> <li>Weak established process for<br/>sharing and reviewing HIS<br/>information with all HIS<br/>stakeholders.</li> </ul>  |
|---|
| <ul> <li>HIS organizational structure and functions</li> <li>the implementation process is not uniform across the sub-national level and not attached to an accountability framework</li> <li>There is no career path</li> <li>Weak process exists for review and updates of organizational structure</li> <li>There is no established plan for career training and retention for each job series/cadre.</li> </ul> |

### **HIS Management and Workforce**

### Current Status (AS IS - 2020)

HIS management and workforce is a key component for the health sector at large to rely on health information on the way of making evidence based decision making, health service planning and delivering quality patient care. It entails the availability of adequate personnel with characteristics, attributes, and capabilities to perform tasks to achieve the intended goals. In the Ethiopian health sector, there are well defined and documented competencies, roles, and responsibilities for HIS task forces at almost all levels, even though much work has to be done in making regular HIS capability assessments and analyses. The training, academic curricula, and processes for developing training and education programs to build HIS skills and competencies nationally are standardized to impart the desired knowledge and skills of the HIS workforce. It requires regular review of the training programs on a regular basis and adapting to changing requirements. There are strong HIS policies that avail hiring mechanisms, with documented roles and responsibilities and harmonized with the information revolution road map and other health sector plans, though the HRIS is not being used to manage the data of the health workforce at all levels. There is a multi-year HIS financing strategy aligned with healthcare and HIS strategic priorities, and financial sources are identified for sustained HIS activities of course requires setting priorities in allocating resources.

| Domain Name        | HIS Management and Workforce                          |                              |

### HIS ICT Infrastructure CURRENT STATUS (AS IS - 2020)

HIS ICT infrastructure deals with the implementation of required technology by applying standard operating procedures to enhance the daily business of the ministry and its shareholders at the national and regional levels are running with less daily business disruption. Based on the HIS assessment on Dec 2020, the current stature of the health sector has its strong points and more areas that need consideration and improvement to realize its goals before the end of 2024. As of Sep 2019, more than 3600 sites have been connected with VPN and 207 sites with YAZMI satellite. The shortcomings are lack of securing backup power sources, lack of efficient hardware, outdated ICT infrastructure. Lack of proper documentation and business continuity plan are also weaknesses that were addressed from the assessment. Because of this and other critical reasons the ICT infrastructure has shown little progress and competency in meeting the growing demand to automate the daily business routines and make the health sector smarter.

Hence the ministry, agencies, regional bureaus, and relevant stakeholders need to shift gear to minimize this vast gap with priority.

### **HIS Standards and Interoperability**

### **CURRENT STATUS (AS IS - 2020)**

HIS standards and interoperability domain deal with the realization of health data exchange using nationally and internationally known and accepted standards. Data exchange serves as a means for efficient and effective collection, aggregation, and use of a single source of data. In Ethiopia, there is a recognized need for data standardization and interoperability. And efforts such as developing national eHealth Architecture, harmonized indicator reporting, and developing national health data dictionary(NHDD) have taken place. The use of standards is a driving factor to operationalize shared/core services. The development of a master facility registry, as part of the Ethiopian national eHealth Architecture, will serve as a single source of truth about a facility list and description was developed. Though those efforts are promising, there is still much work yet to be done. The following matrix will provide some descent details regarding where the Ethiopian Health Sector is - as far as HIS Standards and Interoperability is concerned.

| Domain Name   | HIS Standards and Interoperability   |

### Data Quality and Use CURRENT STATUS (AS IS - 2020)

The Data quality and use is one of the HIS domains which mainly address data quality issues and poor data use culture for informed decision through well organized systems, developed methods and techniques. Currently data quality and use systems have clear and defined procedures for data collection, processing, analysis, and use and implemented at all levels. A regular schedule is defined for conducting data quality reviews and audits. Despite the mentioned efforts It also emphasizes having a functional national data quality and use governing body with an established standardized process by engaging health data actors, developing data quality plans to be reviewed periodically by a coordinating body at all levels using defined standards and procedures. build data use culture through advocacy and promotion, building knowledge management centers to transfer knowledge and skill, recognition and incentives, tracking data use impact and monitoring data use culture improvements.

In this domain, the data quality status was assessed in light with the extent of applicability of data quality assurance techniques such as data review and auditing practices, and the existence and use of nationally defined data management procedures for collection processing and analysis. This endeavor also assessed the level of data use in terms of availability and extent of the implementation data use components for continuous improvement. The main components were availability of data use strategy and data/information, integration and continuous review of data use competencies, level of stakeholder engagement, the practice of synthesizing and communicating information products, reporting and analytics work, availability of data use impact measurement parameters, alignment of the process of data collection with the workflow, and existence and utilization of decision supporting tools.

| Domain<br>Name | Data quality and use |  |
|----------------|----------------------|--|
|----------------|----------------------|--|

| Current<br>Cumulati<br>ve Score    | 2.99  |  |
|------------------------------------|---|--|

# PART II: FUTURE MATURITY STATE (Goals - 2024)

## Leadership and Governance FUTURE STATE (Goals - 2024)

The need to identify relevant interventions to advance capability and improvements will address the identified gaps in the AS-IS, and helps to enforce tracking of overall progress toward already set HSTP-II goals. To meet the aspired goals of the Leadership and Governance domain, MOH and its key stakeholders/partners will have to deal with regular updating, endorsing, overseeing comprehensive HIS policies, legislations and strategic plan, and allocation of the required budget to capture the desired impact on HIS outcomes.

Moreover, the presence of structured processes and applying specific mechanisms is required to address noncompliance. The regulatory agencies will help to ensure adherence to compliance and law enforcement. Applying law enforcement for any compliance brings regularity of HIS leadership, coordination, function and implementation of the HIS. Additionally, having a comprehensive HIS organizational structure and functions will make the implementation process uniform across national and sub-national levels. It is worth noting that defining a clear career path will motivate the health workforce and contribute to the effective and efficient implementation of HIS. The following matrix will provide some crucial items to consider regarding where the Ethiopian Health Sector is expected to reach on the Leadership and Governance.

| Domain Name              | HIS Leadership and Governance |
|--------------------------|-------------------------------|
| Current Cumulative Score | 2.47 (out of 5)               |
| Future Status (2024)     | 4.33 (out of 5)               |

### Improvement Roadmap: HIS Leadership and Governance

|  | strategy planning and M&E plan are not endorsed, not on, document content is not holistic, not refined, not detailed,  |
|--|--|
| High-impact interventions identified to address the gap      | <ul> <li>Develop and promote HIS accountability and transparency framework with clear defined roles and responsibility</li> <li>Strengthen/Establish a designated body responsible for taking corrective measures</li> <li>Strengthen key stakeholders/partners collaboration forum (including private sectors, academia, Civil society organization, professional association)</li> <li>Design a strategy for additional fund &amp; resource mobilization for eHealth and HIS initiatives</li> <li>Promote a transparent M&amp;E system by creating a public health information access platform(Portal, Forum ).</li> </ul> |
| Resources Required to get there (be clear, don't be generic) | <ul> <li>Commitment/allocation of appropriate time</li> <li>Enough skilled manpower in quantity and profession</li> <li>Allocate adequate budget according to the costing exercise</li> </ul>  |
| Primary Responsible Body<br>(Directorate, Agency, etc.)      | <ul> <li>MoH (PPMED, HITD and LSD), Regions health bureaus,<br/>sub regional health administration bodies and all agencies<br/>working on the health sector</li> </ul>   |
| Means of Verification  | <ul> <li>Regular report review</li> <li>Inspection</li> <li>Conduct survey, where applicable.</li> <li>Technical working sessions</li> <li>M &amp; E supportive supervision</li> <li>Review meetings</li> </ul>  |
| Timeline (From/To or definite<br>period)                     | Before the end of HSTP II (2024)   |

| Gaps to be addressed <b>#2:</b> HIS policies and legislation are not comprehensive, are not up to date, and not approved. There is a lack of follow-up on the adherence to SOPs. |   |  |
|--|---|--|
| High-impact interventions identified to address the gap  | <ul> <li>Develop comprehensive capacity building and mentorship strategy</li> <li>Strengthen/Establish a designated body responsible for checking the timely finalization, endorsement and implementation of HIS policies and legislations</li> <li>Strengthen key stakeholders/partners collaboration forum (including private sectors, academia, Civil society organization, professional association)</li> </ul> |  |
| Resources Required to get there (be clear, don't be generic)   | <ul> <li>Commitment/allocation of appropriate time</li> <li>Assign skilled manpower</li> <li>Allocate adequate budget according to the costing exercise</li> </ul>  |  |
| Primary Responsible Body<br>(Directorate, Agency, etc.)  | MoH (PPMED, HITD, and LSD)  |  |
| Means of Verification  | <ul> <li>Inspection of implementation process and functions</li> <li>Conduct survey, where applicable.</li> <li>Technical working sessions</li> <li>M &amp; E supportive supervision</li> <li>Review meetings</li> </ul>  |  |

| Timeline (From/To or definite | Annually , until end of HSTP II (2024) based on each plan of |
|-------------------------------|--|
| period)                       | action   |

| Gaps to be addressed #3: there are no structure, no processes, no specific mechanisms to    |  |  |
|---|--|--|
| address noncompliance and no law enforcement to ensure adherence to organizational policies |  |  |
| and procedures.   |  |  |
| High-impact interventions identified  | <ul> <li>Create a defined body, process, and procedures to ensure</li> </ul>   |  |
| to address the gap  | compliance with SOPs.  |  |
|   | <ul> <li>Create a structure for correction/remediation.</li> </ul>             |  |
|   | <ul> <li>Define standard measures or metrics of compliances</li> </ul>         |  |
|   | (collected, recorded, reported, and verified)                                  |  |
| Resources Required to get there   | <ul> <li>Commitment/allocation of appropriate time</li> </ul>                  |  |
| (be clear, don't be generic)  | <ul> <li>Assign skilled manpower</li> </ul>                                    |  |
|   | <ul> <li>Allocate adequate budget according to the costing exercise</li> </ul> |  |
| Primary Responsible Body  | <ul> <li>MoH (LSD), EFDA and Regions health bureaus and sub</li> </ul>         |  |
| (Directorate, Agency, etc.)   | regional health administration bodies  |  |
| Means of Verification   | <ul> <li>Inspection of implementation process and functions</li> </ul>         |  |
|   | <ul> <li>Formal and informal report review</li> </ul>                          |  |
|   | <ul> <li>Conduct survey, where applicable.</li> </ul>                          |  |
|   | <ul> <li>Technical working sessions</li> </ul>                                 |  |
|   | <ul> <li>M &amp; E supportive supervision</li> </ul>                           |  |
|   | Review meetings  |  |
| Timeline (From/To or definite   | Anytime, until the end of HSTP II (2024)                                       |  |
| period)   |  |  |

| Gaps to be addressed <b>#4: Irregularity of follow-up on the coordination and implementation of HIS</b> initiatives. |  |
|--|--|
| High-impact interventions identified to address the gap  | <ul> <li>Establish a follow up mechanism/ platform to strengthen coordination of HIS initiative, stakeholder engagement to be applied across all sub-national levels.</li> <li>Design and implement the process of HIS initiatives at all levels in the health sector and inline with the national HIS and M&amp;E plan</li> </ul> |
| Resources Required to get there  | Commitment/allocation of appropriate time  |
| (be clear, don't be generic)   | assign skilled manpower  |
|  | <ul> <li>allocate adequate budget according to the costing exercise</li> </ul>   |
| Primary Responsible Body   | <ul> <li>MoH (PPMED, and HITD), Regional health bureaus, sub-</li> </ul>   |
| (Directorate, Agency, etc.)  | regional health administration bodies, and all line agencies   |
| Means of Verification  | Regular report review  |
|  | Conduct survey, where applicable.  |
|  | Technical working sessions   |
|  | M & E supportive supervision   |
|  | Review meetings  |
| Timeline (From/To or definite period)  | Monthly, Quarterly, Annually before end of HSTP II (2024)  |

| Gaps to be addressed #5: HIS organizational structure and functions are not uniform across |   |
|--|---|
| national and sub-national levels with no clear career path.                                |   |
| High-impact interventions identified to address the gap                                    | <ul> <li>Create a standardized and formal process for review and updates of organizational structure with JDs for HIS across all national and sub-national levels.</li> <li>Prepare and execute a national plan for career development training and retention for each HIS personnel.</li> <li>Develop capacity building and mentorship program/plan for continuous professional and career development.</li> </ul> |
| Resources Required to get there  | Commitment/allocation of appropriate time   |
| (be clear, don't be generic)   | assign skilled manpower   |
|  | <ul> <li>allocate adequate budget according to the costing exercise</li> </ul>  |
| Primary Responsible Body   | <ul> <li>MoH (PPMED, and HITD), PSA, Regional health bureaus,</li> </ul>  |
| (Directorate, Agency, etc.)  | sub-regional health administration bodies, and all line agencies  |
| Means of Verification  | <ul> <li>Inspection of implementation process and functions</li> <li>Regular report review</li> <li>Regularly review the job-description</li> <li>Conduct survey, where applicable.</li> <li>Technical working sessions</li> <li>M &amp; E supportive supervision</li> <li>Review meetings</li> </ul>   |
| Timeline (From/To or definite<br>period)   | Before the end of HSTP II (2024)  |

# HIS Management and Workforce - FUTURE STATE (Goals - 2024)

Gaps related to the HIS management and workforce have been identified in the current status assessment section of the domain. For each identified gap, major intervention mechanisms were proposed. In terms of training it is suggested to provide long and short term training for HIS workforce on project management and informatics concepts and on HR manual/guideline for the HR focal at all levels. In order to put mature HIS workforce in place, appropriate guidelines and standards including applying project management principles and informatics concepts should be prepared. Reviewing HIS training and education program as per HERQA/TVET, which clearly defines the engagement platform in HIS financing, and guide on review mechanisms on the financial requirements should be performed. With regards to HIS workforce assessment, there should be capability assessment and supportive supervision on recruitment. An assessment should also be done on hiring mechanisms, HIS workforce need, HIS financial need throughout HIS implementation lifecycle. Implementation of iHRIS should be performed at all levels. The conducted competencies, roles, and responsibilities should be disseminated to all concerned bodies. It is vital to review the existing HIS strategies regularly based on the assessments conducted within this domain.

| Domain Name              | HIS Management and Workforce |
|--------------------------|------------------------------|
| Current Cumulative Score | 3.37 (out of 5)              |
| Future Status (2024)     | 4.67 (out of 5)              |

### Improvement Roadmap: HIS Management and Workforce

| Capa to be addressed #1. Information  | and project management concents are used in limited actings           |
|---|---|
| Gaps to be addressed #1: Informatics and project management concepts are used in limited settings       |   |
| (only in some projects at national level) for developing, implementing, and managing HIS activities and |   |
| projects  |   |
| High-impact interventions identified  | <ul> <li>Develop Standards/guidelines/SOPs on how to apply</li> </ul> |
| to address the gap  | project management principles and informatics concepts in             |
| 01  | HIS projects  |

|                                       | <ul> <li>Short and long term training, coaching, and mentoring on<br/>project management and informatics to HIS workforce at<br/>national and regional levels</li> </ul>   |
|---------------------------------------|--|
| Resources Required to get there       | <ul> <li>Training manual/multimedia training materials</li> </ul>  |
| (be clear, don't be generic)          | Trainer  |
|                                       | <ul> <li>Training and workshop budget</li> </ul>   |
| Primary Responsible Body              | HITD   |
| (Directorate, Agency, etc.)           |  |
| Means of Verification                 | <ul> <li>Trained national and regional levels HIS Experts personnel<br/>on project management and informatics concepts</li> <li>Standard/Guideline/SOP prepared on informatics and<br/>project management</li> <li>Multimedia Training materials prepared</li> </ul> |
| Timeline (From/To or definite period) | Until end of 2021  |

| Gaps to be addressed <b>#2</b> : There is weak hiring mechanism of distributing HIS workforce to all health offices and facilities |  |
|--|--|
| High-impact interventions identified to address the gap  | <ul> <li>Train and coach on HR manual and guidelines focusing on<br/>hiring mechanisms to all HR officers at national and<br/>regional levels</li> <li>Conduct supportive supervision on recruitment, hiring and<br/>deployment of HIS workforce on regular basis</li> </ul> |
| Resources Required to get there  | Civil service directive/HR manual  |
| (be clear, don't be generic)   | Trainers/Experts   |
|  | Budget   |
| Primary Responsible Body   | HRA  |
| (Directorate, Agency, etc.)  |  |
| Means of Verification  | Qualified HIS workforce at all levels  |
|  | <ul> <li>Adequate HIS workforce at all levels</li> </ul>   |
| Timeline (From/To or definite period)  | Until end of 2022  |

| Gaps to be addressed <b>#3</b> : Training and education programs are not being reviewed on a regular basis by the designated authority to ensure alignment with HIS needs and technology |   |
|--|---|
| High-impact interventions identified to address the gap  | Prepare implementation guideline to review HIS training and education program as per HERQA/TVET training and education standard |
| Resources Required to get there (be clear, don't be generic)   | HERQA/TVET training and education standard<br>Experts<br>Budget   |
| Primary Responsible Body<br>(Directorate, Agency, etc.)  | HRD   |
| Means of Verification  | Reviewed HIS Training and education program   |
| Timeline (From/To or definite period)  | Until end of 2022   |

Gaps to be addressed **#4:** Insufficient HIS workforce at regions, health offices and health facilities and region specific HIS Workforce analysis/Labor Market Analysis(HLMA), and HIS capability assessment and analysis is not conducted to forecast future demands

| ······································                  |   |
|---|---|
| High-impact interventions identified to address the gap | Prepare/update a guideline/SOP to conduct HIS workforce need<br>assessment, workforce analysis/Labor Market Analysis(HLMA)<br>and HIS capability assessment<br>Review and update HIS workforce structure based on the<br>assessment result and enforce it at all levels |
| Resources Required to get there                         | Expert to prepare the guideline and conduct the assessment  |
| (be clear, don't be generic)                            | Budget for the assessment   |
| Primary Responsible Body                                | HITD/HRD in collaboration with regions  |
| (Directorate, Agency, etc.)                             |   |
| Means of Verification                                   | Availability of sufficient HIS workforce at all levels  |
| Timeline (From/To or definite                           | Until mid of 2022   |
| period)   |   |

Gaps to be addressed **#5**: Data on vacancies and staffing needs are not collected and managed in the HRIS on a regular basis and used to inform hiring, distribution of staff, and training and education needs, and to advocate for budgets to meet HIS needs nationally

| High-impact interventions identified | Implement the iHRIS at all levels to inform hiring, distribution of |
|--------------------------------------|---|
| to address the gap                   | staff, and training and education needs, and to advocate for        |
| 51                                   | budgets   |
| Resources Required to get there      | iHRHIS application at all levels                                    |
| (be clear, don't be generic)         | Budget for training/deployment and overall implementation of        |
|                                      | iHRIs as per the iHRIS implementation plan                          |
| Primary Responsible Body             | HRA/HITD  |
| (Directorate, Agency, etc.)          |   |
| Means of Verification                | Number of facilities implemented HRIS to inform hiring,             |
|                                      | distribution of staff, and training and education needs, and to     |
|                                      | advocate for budgets  |
| Timeline (From/To or definite        | Until end of 2024   |
| period)                              |   |

| Gaps to be addressed <b>#:6</b> HIS competencies, roles, and responsibilities of staff performing HIS functions are <b>not disseminated</b> to the concerned staff |  |
|--|--|
| High-impact interventions identified   | Disseminate the competencies, roles, and responsibilities to the |
| to address the gap   | concerned staff using all mechanisms                             |
| Resources Required to get there  | Printing resources   |
| (be clear, don't be generic)   | Budget for dissemination, for training and awareness creation    |
|  | for HRA focals at all levels                                     |
| Primary Responsible Body   | HRA  |
| (Directorate, Agency, etc.)  |  |

| Means of Verification                 | Number of health offices and facilities received HIS competencies, roles, and responsibilities document |
|---------------------------------------|---|
| Timeline (From/To or definite period) | Until end of 2022   |

| Gaps to be addressed <b>#7:</b> Limited Private-public partnership(PPP) funding to the HIS implementation |  |  |
|---|--|--|
| High-impact interventions identified  | Prepare guideline which clearly defines the engagement |  |

#### HIS ICT Infrastructure - FUTURE STATE (Goals - 2024)

To meet the aspired goals of HIS ICT infrastructure domain, MOH and its stakeholders will have to deal with improving redundant power source options, distribute hardware, establish business continuity plan, provide technical support, establish redundant network and internet connection, develop network connectivity standards, create a regular reporting mechanism, and assign responsible bodies in all health facilities. Overall, to address certain gaps, developing harmonized and comprehensive plans is inevitable.

The following matrix will provide some crucial items to consider regarding where the Ethiopian Health Sector is expected to reach on the HIS ICT infrastructure by the end of 2024.

| Domain Name              | HIS ICT Infrastructure |
|--------------------------|------------------------|
| Current Cumulative Score | 2.29 (out of 5)        |
| Future Status (2024)     | 4 (out of 5)           |

#### Improvement Roadmap: HIS Infrastructure

#### HIS Reliable power/electricity Subcomponent

| Gaps to be addressed #1: Lack of alternative power source provided at most healthcare facilities. |   |
|---|---|
| High-impact interventions identified  | Providing feasible solutions and interventions based on the current         |
| to address the gap  | circumstances of the area where the facility is located.                    |
| Resources Required to get there (be   | Using power supply options such as generator, solar system, UPS, biogas,    |
| clear, don't be generic)  | wind turbine, geothermal etc  |
| Primary Responsible Body  | Sequentially the health facility is responsible then if the issue is beyond |
| (Directorate, Agency, etc.)   | their limit they could escalate it to the higher body hierarchically.       |
| Means of Verification   | Continues power supply with less business disruption                        |
| Timeline (From/To or definite period)   | until the end of the (budget strategic fiscal year by 2024)                 |

| Gaps to be addressed #2: Lack of a responsible body that will follow up on power failure issues upto sub-national healthcare facilities level . |  |
|---|--|
| High-impact interventions identified  | Assigning a responsible body within each facility or for a group of facilities |
| to address the gap  | located at sub-national level  |
| Resources Required to get there (be   | recruiting and establishing(if there is none already) the required body.       |
| clear, don't be generic)  |  |
| Primary Responsible Body  | the health facility at sub-national level                                      |
| (Directorate, Agency, etc.)   |  |

| Means of Verification                 | requesting for a report with the organizational structure and manpower tally. |
|---------------------------------------|---|
| Timeline (From/To or definite period) | until the end of the (budget strategic fiscal year by 2024)                   |

## Gaps to be addressed #3: Lack of business continuity plan related to power supply in most of the health sectors.

| High-impact interventions identified to address the gap | <ul> <li>Formulating national BCP</li> <li>Having a BCP approved document owned at sub-national level to follow when power related failures occur.</li> </ul> |
|---|---|
| Resources Required to get there (be                     | Comprehensive and approved BCP.   |
| clear, don't be generic)                                |   |
| Primary Responsible Body                                | FMOH  |
| (Directorate, Agency, etc.)                             |   |
| Means of Verification                                   | Clear business continuity plan  |
| Timeline (From/To or definite period)                   | until the end of the (budget strategic fiscal year by 2024)   |
|   |   |

#### Improvement Roadmap: HIS ICT Infrastructure Subcomponent

## Gaps to be addressed #4: Lack of collaboration between health facilities and small-scale enterprises to address support requirements at the facility level.

|   | -   |
|---|---|
| High-impact interventions identified to address the gap | <ul> <li>Asses the existing gap and prepare required action plan</li> <li>Engaging local small scale enterprises to provide IT support.</li> <li>Operating and maintenance services support plan</li> </ul> |
| Resources Required to get there (be                     | <ul> <li>skilled manpower and financial support</li> </ul>  |
| clear, don't be generic)                                | support from senior management  |
| Primary Responsible Body                                | Health Facility   |
| (Directorate, Agency, etc.)                             |   |
| Means of Verification                                   | <ul> <li>Operations and maintenance services are included in the HIS plan<br/>or health plan.</li> </ul>  |
|   | <ul> <li>less business disruption.</li> </ul>   |
| Timeline (From/To or definite period)                   | until the end of the (budget-strategic fiscal year by 2024)   |

## Gaps to be addressed #5: There is a gap between Internet Service Provider and health sector benefactors.

| High-impact interventions identified  | <ul> <li>Holding regular meetings with stakeholders to minimize the gap</li> </ul> |
|---------------------------------------|--|
| to address the gap                    | concerning internet connection and VPN disruption.                                 |
| Sector and Set                        | <ul> <li>implemented consistente operations and maintenance SOPs</li> </ul>        |
| Resources Required to get there (be   | contracting SLA  |
| clear, don't be generic)              | <ul> <li>creating discussion forums</li> </ul>                                     |
| Primary Responsible Body              | FMOH   |
| (Directorate, Agency, etc.)           |  |
| Means of Verification                 | <ul> <li>Regular progressive meeting,</li> </ul>                                   |
|                                       | <ul> <li>Monitoring and evaluation sessions</li> </ul>                             |
|                                       | developed SOPs   |
| Timeline (From/To or definite period) | until the end of the (budget-strategic fiscal year by 2024)                        |
|                                       |  |

#### Improvement Roadmap: HIS Hardware Subcomponent

## Gaps to be addressed #6: Inadequate followup and technical support from the ministry/health care facility for broken VPN connection

| High-impact interventions identified to address the gap      | Implementing regular monitoring mechanisms so as to provide support on a timely base.  |
|--|--|
| Resources Required to get there (be clear, don't be generic) | <ul> <li>Monitoring tool and dedicated technical support team that will oversee the VPN connection.</li> <li>Performing preventive maintenance regularly.</li> <li>A functional and always-staffed help desk exists at national and subnational levels.</li> </ul> |
| Primary Responsible Body (Directorate, Agency, etc.)         | FMOH , Agencies , regional health bureau and healthcare facilities.  |
| Means of Verification  | <ul> <li>uninterrupted VPN connection</li> <li>The hardware is working optimally to support operations.</li> </ul>   |
| Timeline (From/To or definite period)                        | until the end of the (budget-strategic fiscal year by 2024)  |

| Gaps to be addressed #7: Poor plan for replacement of outdated/ damaged hardware's |  |  |
|--|--|--|
| High-impact interventions identified to address the gap                            | Performing hardware assessment on a regular basis and preparing replacement plans based on the assessment. |  |
| Resources Required to get there (be clear, don't be generic)                       | <ul> <li>have planned asset management strategy</li> <li>acquire financial support</li> </ul>              |  |
| Primary Responsible Body<br>(Directorate, Agency, etc.)                            | FMOH , Agencies , regional health bureau and healthcare facilities.  |  |
| Means of Verification  | <ul> <li>Fully functional and updated hardware device</li> </ul>   |  |
| Timeline (From/To or definite period)  | until the end of the (budget-strategic fiscal year by 2024)  |  |

## Gaps to be addressed #8: Not meeting the increasing demand of hardware from health facilities sufficient supply.

| eapp.y.  |   |
|--|---|
| High-impact interventions identified to address the gap      | <ul> <li>asses the now stage to find out the needs of priority areas</li> <li>provides sufficient hardware that will assist in accessing/automating ehealth services.</li> <li>ensure procedures are in place at the facility level for continued support and hardware replacement from the ministry</li> </ul> |
| Resources Required to get there (be clear, don't be generic) | <ul> <li>perform Information System audit</li> <li>perform gap assessment</li> <li>prepare a delivery plan based on the assessment.</li> <li>acquire financial support</li> </ul>   |
| Primary Responsible Body<br>(Directorate, Agency, etc.)      | FMOH, Agencies, regional health bureau and healthcare facilities.   |
| Means of Verification  | <ul> <li>Most of the health ministry's national and subnational offices have<br/>adequate hardware.</li> </ul>  |
| Timeline (From/To or definite period)                        | until the end of the (budget-strategic fiscal year by 2024)   |

## Improvement Roadmap: HIS Network and Internet Connectivity

#### Subcomponent

## Gaps to be addressed #9: Lack of regular network and internet connectivity assessment and reporting methods.

| memous.  |  |
|--|--|
| High-impact interventions identified to address the gap      | <ul> <li>develop/implement a monitoring tool with GPS locator and smart<br/>sensors to send alert messages incase of system health status<br/>change.</li> <li>inforce system failure reporting procedures</li> <li>integrate automated systems sending status change alert<br/>messages to responsible persons</li> </ul> |
| Resources Required to get there (be clear, don't be generic) | <ul> <li>tools and solutions with the specified requirements to assess and<br/>report the network connectivity.</li> <li>procedures to follow incase of failure.</li> </ul>  |
| Primary Responsible Body<br>(Directorate, Agency, etc.)      | FMOH, national and subnational stakeholders  |
| Means of Verification  | <ul> <li>implementation of such tools and solutions</li> <li>frequent system status update reports</li> <li>Most national offices of the health ministry have a working network connection and about half of subnational offices have a strong and reliable network connection.</li> </ul>                                 |
| Timeline (From/To or definite period)                        | until the end of the (budget-strategic fiscal year by 2024)  |

| Gaps to be addressed #10: No uniform network and internet connectivity platform on each health sector at national and regional level. |  |
|---|--|
| High-impact interventions identified to address the gap   | create and establish a national network connection standard  |
| Resources Required to get there (be<br>clear, don't be generic)PrimaryResponsibleBody<br>(Directorate, Agency, etc.)                  | <ul> <li>perform network and connectivity assessment on health facilities</li> <li>Comprehensive standard document for network connectivity.</li> <li>FMOH, national and subnational stakeholders</li> </ul> |
| Means of Verification   | <ul> <li>Having a uniform network and connectivity platform at national and sub-national level.</li> <li>Ensure a dedicated network support team is in place.</li> </ul>                                     |
| Timeline (From/To or definite period)   | until the end of the (budget-strategic fiscal year by 2024)  |

| Gaps to be addressed #11: Lack of redundant internet/WAN connection options |   |
|---|---|
| High-impact interventions identified to address the gap                     | Establish multiple connection options to improve service uptime using the latest technological interventions.                                     |
| Resources Required to get there (be clear, don't be generic)                | <ul> <li>Technological options (Satellite, Fiber optics,)</li> <li>skilled and trained manpower</li> <li>Financial support from donors</li> </ul> |
| Primary Responsible Body<br>(Directorate, Agency, etc.)                     | FMOH, national and subnational stakeholders   |
| Means of Verification   | <ul> <li>Less service interruption.</li> <li>Gaps in connectivity are documented and addressed in standard processes.</li> </ul>                  |
| Timeline (From/To or definite period)                                       | until the end of the (budget-strategic fiscal year by 2024)   |

Г

### Improvement Roadmap: HIS Business Continuity Subcomponent

| Gaps to be addressed #12: There are no standard business continuity plans. |   |
|--|---|
| High-impact interventions identified to address the gap                    | <ul> <li>Develop and establish business continuity plan</li> <li>Develop Standard Operating Procedures</li> </ul>   |
| Resources Required to get there (be clear, don't be generic)               | Approved national Business continuity document  |
| Primary Responsible Body (Directorate, Agency, etc.)                       | FMOH  |
| Means of Verification  | <ul> <li>Having a signed &amp; sealed printout of the BCP and SOP.</li> <li>The HIS BCP is integrated in the HIS strategic plan and regularly managed by the government-designated authority to address goals and gaps in meeting HIS needs.</li> </ul> |
| Timeline (From/To or definite period)                                      | until the end of the (budget-strategic fiscal year by 2024)   |

## Gaps to be addressed #13: Even though there are BCP initiatives in some facilities they are not documented.

| High-impact interventions identified to address the gap | <ul><li>Ensure proper documentation is in place</li><li>Develop follow up checklist</li></ul> |
|---|---|
| Resources Required to get there (be                     | having a business documentation process   |
| clear, don't be generic)                                |   |
| Primary Responsible Body                                | national and subnational stakeholders   |
| (Directorate, Agency, etc.)                             |   |
| Means of Verification                                   | regular reports with the status update  |
| Timeline (From/To or definite period)                   | until the end of the (budget-strategic fiscal year by 2024)                                   |

Г

# HIS Standards and Interoperability - FUTURE STATE (Goals - 2024)

The HIS goal for 2024 aspires to address the below identified eight main HIS standards and interoperability gaps. A maximum effort from MOH and its stakeholders is needed to address the gaps in standards, guidelines, and minimum data set development, update, and maintenance. The need to develop client registry service and enhance other existing national registry services based on a formal feedback process is the second identified gap underpins the data exchange efforts. As interoperability and data exchange is the ultimate goal, unique person identification and aggregated, commodity and security data exchange practices and implementation are also enablers of the overall process. For this and other interoperability LAB enables implementers to test their participating system and get certified for production and rollout. The table below outlines the identified gaps and their corresponding intervention, needed resources, responsible organization, and the key performance indicators to measure the results.

| Domain Name              | HIS Standards and Interoperability |
|--------------------------|------------------------------------|
| Current Cumulative Score | 2.38 (out of 5)                    |
| Future Status (2024)     | 4.11 (out of 5)                    |

#### Improvement Roadmap: HIS Standards and Interoperability

| Gaps to be addressed #1: HIS Data Standards and Guidelines are not endorsed |  |
|---|--|
| High-impact interventions identified to address the gap                     | <ul> <li>Alignment of HIS standards and guidelines with existing practices, workflows and business needs.</li> <li>Plan for regular review and continuous update of standards and guidelines.</li> <li>Socializing and promoting prepared and updated standards and guidelines and endorsement of these documents by authorized bodies.</li> </ul> |
| Resources Required to get there<br>(be clear, don't be generic)             | <ul> <li>Dedicated working group or committee of personnels to<br/>follow and maintain standards documents and<br/>implementations guidelines.</li> <li>International experiences on standards and protocols<br/>continuity and followup.</li> <li>Finance for events to update and socialize the standards<br/>and guidelines.</li> </ul>         |

| Primary Responsible Body<br>(Directorate, Agency, etc.) | MOH(HITD, PPMED)   |
|---|--|
| Means of Verification                                   | <ul> <li>Number and type of endorsed domain specific HIS<br/>standard and guidelines</li> <li>Number of uploaded documents on a central location (e.g.<br/>MoH Knowledge Management System)</li> </ul> |
| Timeline (From/To or definite period)                   | 2024   |

| Gaps to be addressed #2: Minimum                             | clinical data sets are not defined   |
|--|--|
| High-impact interventions identified to address the gap      | <ul> <li>Development of national minimum data sets, for clinical care, laboratory and pharmacy, that has the capability to centrally publish and expose resources.</li> <li>Preparing a plan for a regular review and update of minimum data set.</li> <li>Introduction of mapping possibility between prepared minimum data sets and internationally known codes sets.</li> </ul> |
| Resources Required to get there (be clear, don't be generic) | <ul> <li>Financial resources to conduct workshops in preparing standards which accommodate minimum data sets.</li> <li>Human capital dedicated to prepare and follow the work.</li> <li>financial resource needed to cover cost implication endorsement any global standard, if any</li> </ul>   |
| Primary Responsible Body<br>(Directorate, Agency, etc.)      | MOH(HITD, PPMED)/Partners(Implementers, funders)/Health facilities/ universities   |
| Means of Verification  | Centrally hosted list of minimum data sets, for clinical,<br>laboratory, pharmacy and related services, at the national health<br>data dictionary depot.   |
| Timeline (From/To or definite period)                        | 2024   |

| Gaps to be addressed <b>#3: Data exchange standards are not developed and integrated in the</b><br>national HIS plan |   |
|--|---|
| High-impact interventions identified to address the gap  | <ul> <li>Development of Industry based health data exchange and messaging standard.</li> <li>Approval, review and monitoring of health data exchange and messaging standard in a standardized operating procedure and integrate in the national health plan</li> <li>Preparation of interoperability LAB to test and certify onboard implementation activities.</li> </ul>                              |
| Resources Required to get there<br>(be clear, don't be generic)  | <ul> <li>Cost related to the development and preparation of the national interoperability LAB which serves as testing and certification environment for clearinghouse to production mode.</li> <li>Skilled human capital who manages the interoperability LAB.</li> <li>Cost related to workshop and training on development / preparation and use of data exchange and messaging standards.</li> </ul> |
| Primary Responsible Body   | MOH(HITD, PPMED)/Partners(Implementers, funders)/Health   |
| (Directorate, Agency, etc.)  | facilities/ universities  |

| Means of Verification                 | A nationally defining interoperability and messaging standards<br>which address the need for data exchange among eHA<br>components and ancillary systems, if any. |
|---------------------------------------|---|
| Timeline (From/To or definite period) | 2024  |

|                                      | nplementation and utilization of core registry services                        |
|--------------------------------------|--|
| High-impact interventions identified | Periodic update of registry services inline with HIS strategic                 |
| to address the gap                   | plan.  |
|                                      | <ul> <li>Establishment of a feedback process to review and</li> </ul>          |
|                                      | address gaps of the registry services.   |
|                                      | <ul> <li>A central registry for facility, indicator and terminology</li> </ul> |
|                                      | services and own the possibility of instant exposure of                        |
|                                      | resources to implementing systems.   |
| Resources Required to get there      | <ul> <li>cost related to the development of the central registry</li> </ul>    |
| (be clear, don't be generic)         | portal.  |
|                                      | <ul> <li>necessary human resources to monitor and maintain the</li> </ul>      |
|                                      | registry service and manage the update process                                 |
| Primary Responsible Body             | <ul> <li>MOH(HITD, PPMED)/Partners(Implementers,</li> </ul>                    |
| (Directorate, Agency, etc.)          | funders)/RHB/ universities   |
|                                      |  |
| Means of Verification                | Capability of Interoperability with other systems using                        |
|                                      | central terminology, facility and indicator registries.                        |
|                                      | <ul> <li>Registry Maturity and Governance document</li> </ul>                  |
|                                      | <ul> <li>Digital health projects inventory report on the existing</li> </ul>   |
|                                      | status of eHA components.  |
|                                      | • The maturity level of a shared health record as a service.                   |
| Timeline (From/To or definite        | 2024   |
| period)                              |  |
| [ F •···• •·)                        | 1  |

| Gaps to be addressed #5: Lack of u                           | nique person identification system  |
|--|---|
| High-impact interventions identified to address the gap      | <ul> <li>Develop client registry to share unique identifiers<br/>developed and assigned by other programs/systems</li> <li>Enable participating systems to share personal unique<br/>identifiers.</li> </ul>  |
| Resources Required to get there (be clear, don't be generic) | <ul> <li>financial resource to support the initiative of digital ID.</li> <li>cost implication in development of client registry</li> <li>workshop and training cost in socializing and familiarizing client registry and the digital ID</li> </ul> |
| Primary Responsible Body<br>(Directorate, Agency, etc.)      | <ul> <li>MOH(HITD, PPMED)/Partners(Implementers,<br/>funders)/RHB/ universities</li> </ul>  |
| Means of Verification  | <ul> <li>A functional client registry</li> <li>an implementation guide which depict the procedure how<br/>implementers should handle issue of client identification</li> </ul>  |
| Timeline (From/To or definite period)                        | 2024  |

## Gaps to be addressed **#6: Limited aggregate data exchange practices and scale up implementations**

| High-impact interventions identified to address the gap      | <ul> <li>Automatic reporting of aggregated data using defined<br/>standards at all levels.</li> <li>Localization and contextualization of global data standards<br/>and giving feedback when necessary.</li> </ul>  |
|--|---|
| Resources Required to get there (be clear, don't be generic) | <ul> <li>Development/test cost of different aggregated data<br/>exchange use cases.</li> <li>Cost implications related to the profiling and adoption of<br/>globally known exchange data standards</li> <li>Human resource to maintain the development, feedback<br/>and update process.</li> </ul> |
| Primary Responsible Body<br>(Directorate, Agency, etc.)      | <ul> <li>MOH(HITD, PPMED)/Partners(Implementers,<br/>funders)/RHB/ universities</li> </ul>  |
| Means of Verification  | <ul> <li>Messaging and aggregated data exchange standard document</li> <li>number of participating components and systems that have the capability of exchanging aggregated data automatically at a regional or national level</li> </ul>   |
| Timeline (From/To or definite period)                        | 2024  |

| Gaps to be addressed <b>#7: lack of capability to exchange data between commodity management</b> |
|--|
| and health information systems   |

| and health information systems                               |   |
|--|---|
| High-impact interventions identified to address the gap      | <ul> <li>Define peer to peer basic data exchange between systems across the entire supply chain</li> <li>Prepare standardized exchange and messaging standards for commodity data exchange</li> </ul>   |
| Resources Required to get there (be clear, don't be generic) | <ul> <li>Cost implication related to the development or<br/>customization of existing supply chain applications to fit<br/>into the concept of data exchange.</li> <li>Cost implication related to the development of standard<br/>aggregated commodity data exchange and messaging<br/>documents.</li> </ul> |
| Primary Responsible Body<br>(Directorate, Agency, etc.)      | <ul> <li>MOH(HITD, PPMED)/Partners(Implementers,<br/>funders)/RHB/ universities</li> </ul>  |
| Means of Verification  | <ul> <li>Messaging and commodity data exchange standard document.</li> <li>number of participating components and systems that have the capability of exchanging commodity data automatically at all levels</li> </ul>  |
| Timeline (From/To or definite period)                        | 2024  |

| Gaps to be addressed <b>#8: There are</b><br>procedures | no security standards for data exchange and enforcement  |
|---|--|
| High-impact interventions identified to address the gap | <ul> <li>Define security requirements for preparation of data, application and network infrastructure to support data exchange</li> <li>design a robust review and update processes to ensure privacy, confidentiality and compliance of health data exchange</li> </ul> |

| Resources Required to get there (be clear, don't be generic) | <ul> <li>human resource, in the area of security, responsible for the administrative, technical and physical safeguard operations.</li> <li>cost implication related with preparation or adoption of security, privacy and data ownership standard.</li> </ul>                   |
|--|--|
| Primary Responsible Body                                     | <ul> <li>MOH(HITD, PPMED)/Partners(Implementers,</li> </ul>  |
| (Directorate, Agency, etc.)                                  | funders)/RHB/ universities   |
| Means of Verification  | <ul> <li>number security, privacy and data ownership standard documents</li> <li>establishment of a formal body to ensure review processes and enforce data security standards</li> <li>security, privacy and data ownership test results of participating components</li> </ul> |
| Timeline (From/To or definite period)                        | 2024   |

#### Data quality and use - FUTURE STATE (Goals - 2024)

The MOH defined IR as a priority agenda in the health sector transformation plan phase two -HSTP2. A high level of data quality and practice of informed decisions for better health outcomes are one of the pillars of IR to which the MoH identified major bottlenecks and proposed high impact interventions in the coming five years. To complement, this maturity assessment was conducted focusing on five domains of HIS and tried to describe the current status to a certain level of detail, major gaps and determined the future state or targets to each sub component. This section describes the future state of data quality and use, Identified interventions, resource required, implementing body and time period. It also indicates the appropriate means of verification for each proposed intervention.

| Domain Name              | HIS Data quality and use |
|--------------------------|--------------------------|
| Current Cumulative Score | 2.99 (out of 5)          |
| Future Status (2024)     | 4.72 (out of 5)          |

#### Improvement Roadmap: HIS Data quality and use

**Gaps to be addressed #1:** Data reviews and audits are not conducted on a regular schedule using automated and manual DQA processes to ensure defined levels of quality, Limited use of metrics reported on data quality issues for continuous improvement ; DQA plan is not periodically reviewed by the coordinating body to meet the evolving data quality needs

| Data quality assurance & control                        |  |
|---|--|
| High-impact interventions identified to address the gap | <b>Develop periodic data Quality improvement initiative</b> (it primarily identifies data quality issues, planning, conducting, monitoring, using the metrics for continuous improvement and sharing the results for all actors. |

| Resources Required to get there (be clear, don't be generic) | Budget for capacity building,Reviewing tools, Preparing M&E<br>framework, Conducting national and sub nationals DQA activities,<br>Workshops on DQetc. |
|--|--|
| Primary Responsible Body                                     | All data actors (Facilities, Administrative health offices, MOH,   |
| (Directorate, Agency, etc.)                                  | Partners, Donors, other stakeholders)  |
| Means of Verification  | External data quality audit  |
| Timeline (From/To or definite                                | Hamile/July 2021- Sene June/2025   |
| period)  |  |

**Gaps to be addressed #2:** No Standard operating procedures for data management integrated with the national HIS plan

| Data Management                      |   |
|--------------------------------------|---|
| High-impact interventions identified | Adopt and implement SOPs' for Data Management (For                                      |
| to address the gap                   | collection, reporting, analytics data quality assurance techniques and information use) |
| Resources Required to get there      | Budget for workshops  |
| (be clear, don't be generic)         |   |
| Primary Responsible Body             | Facilities, Administrative health offices, MOH, HIS Partners                            |
| (Directorate, Agency, etc.)          |   |
| Means of Verification                | Developed and Executed SOP's  |
| Timeline (From/To or definite        | Hamile/July 2021- Sene June/2025  |
| period)                              |   |

**Gaps to be addressed #3:** The data use strategy is not adapted to meet emerging decision-making needs of program managers, policymakers, and providers interacting with HIS, Condition-specific order sets and documentation templates are not defined; No Knowledge-based systems are implemented in some settings to support decision making

| Data Use Strategy, Decision Suppo                            | Data Use Strategy, Decision Support  |  |
|--|--|--|
| High-impact interventions identified                         | Adopt and implement data use strategies to accommodate   |  |
| to address the gap   | the emerging needs of data use for care providers and program managers   |  |
| Resources Required to get there (be clear, don't be generic) | Budget for Workshop for developing & reviewing standards and<br>procedures for PMT(Performance Monitoring team) QIT (Quality<br>improvement team), Clinical forms, Clinical Audit, incentive<br>mechanisms, and condition-specific clinical documentation<br>templates |  |
| Primary Responsible Body                                     | MoH (PPMED, Clinical Directorate), Regions, Hospitals,   |  |
| (Directorate, Agency, etc.)                                  | Partners and other stakeholders.   |  |
| Means of Verification  | Adopted and implemented data use strategies (PMT, QIT, Clinical forms,)  |  |
| Timeline (From/To or definite period)                        | Hamile/July 2021- Sene June/2025   |  |

**Gaps to be addressed #4:** The data systems/applications in use don't ensure reliable and appropriate access data at all levels for authorized users; Changes in reporting requirements are not accommodated with minimal disruptions to data availability; Data availability is not monitored for continuous improvements and to meet emerging health sector needs
Information/Data Availability

| High-impact interventions identified to address the gap      | <b>Develop and Manage Data repositories and Warehouse</b> ( to ensure data availability for authorized users: Data from routine( individual & aggregate) and population based sources). |
|--|---|
| Resources Required to get there (be clear, don't be generic) | Budget to build & manage the data repositories and data warehouse   |
| Primary Responsible Body<br>(Directorate, Agency, etc.)      | MOH (PPMED, HITD, Clinical Directorate), Partners   |
| Means of Verification  | Built and managed data repositories and warehouse   |
| Timeline (From/To or definite period)                        | Hamile/July 2021- Sene June/2025  |

| Gaps to be addressed #5: Data availability for individual based data to meet emerging health sector |   |
|---|---|
| needs   |   |
| Information/Data Availability   |   |
| High-impact interventions identified to address the gap   | Automating point of care/service information systems (EMR,eCHIS)                      |
| Resources Required to get there (be clear, don't be generic)  | Budget for development and implementation of EMR systems/EHR or Shared health records |
| Primary Responsible Body<br>(Directorate, Agency, etc.)   | MOH, Regional health Bureaus, Facilities and partners                                 |
| Means of Verification   | Individuals health data captured in electronic format                                 |
| Timeline (From/To or definite period)   | Hamile/July 2021- Sene June/2025  |

| Gaps to be addressed #6: Data use level based                | e competency development is not tracked by user type and not   |
|--|--|
| Data Competencies  |  |
| High-impact interventions identified to address the gap      | <b>Develop/Review and implement data quality</b> and use training guide based on different level of competencies   |
| Resources Required to get there (be clear, don't be generic) | Budget for revision & development workshops, trainings   |
| Primary Responsible Body<br>(Directorate, Agency, etc.)      | MOH, Regions & Partners  |
| Means of Verification  | Developed or revised data quality training guides (both facilitator<br>and participant)<br>Developed or revised data use training guides (both facilitator<br>and participant) |
| Timeline (From/To or definite period)                        | Hamile/July 2021- Sene June/2025   |

| Gaps to be addressed #7: There is no a standardized plan for tracking and measuring competencies; |  |  |
|---|--|--|
| There is no an established feedback   | There is no an established feedback mechanism to make updates and address gaps |  |
| Data Competencies   |  |  |
| High-impact interventions identified  | Develop data and implement competencies measurement,                           |  |
| to address the gap  | tracking and feedback platform   |  |
| Resources Required to get there   | Budget for workshops, trainings  |  |
| (be clear, don't be generic)  |  |  |
| Primary Responsible Body  | MOH, Regions & Partners  |  |
| (Directorate, Agency, etc.)   |  |  |

| Means of Verification                 | Developed and implemented data competencies<br>measurement,tracking and feedback platform |
|---------------------------------------|---|
| Timeline (From/To or definite period) | Hamile/July 2021- Sene June/2025  |

**Gaps to be addressed # 8:** Guidance on the design and use of information products is not up-to-date, implemented, and monitored for compliance by an established governing body; Guidance on the design and use of information products is not periodically reviewed and revised to ensure its applicability and relevance to emerging and future decision-making needs; No guidance is available for the design and use of advanced analytics (such as triangulation, further analysis on related)

| Data Symthesis and Communication   |   |
|--|---|
| Data Synthesis and Communication<br>High-impact interventions identified<br>to address the gap | Develop and implement information product generation,dissemination and compliance guide |
| Resources Required to get there (be clear, don't be generic)                                   | Budget for workshops, trainings   |
| Primary Responsible Body<br>(Directorate, Agency, etc.)  | MOH-PPMED, Agencies, other stakeholders such as CSA                                     |
| Means of Verification  | Information product generation, dissemination and compliance guide                      |
| Timeline (From/To or definite period)  | Hamile/July 2021- Sene June/2025  |

**Gaps to be addressed #9:** Parameters on the measurement of the impact of data use are not up-todate, implemented, monitored, and reviewed by a designated governing body; Parameters on the measurement of the impact of data use not are integrated in the HIS and/or health plans; Plans for process feedback are not documented and disseminated

| Data Use Impact  |  |
|--|--|
| High-impact interventions identified to address the gap      | Develop strategic guide (defining the metrics, monitoring and measuring data use impact) |
| Resources Required to get there (be clear, don't be generic) | budget for workshops and training  |
| Primary Responsible Body<br>(Directorate, Agency, etc.)      | All data actors  |
| Means of Verification  | Data use impact strategic guide developed  |
| Timeline (From/To or definite period)                        | Hamile/July 2021- Sene June/2025   |

Gaps to be addressed #10: Metrics on reporting and analysis capabilities with feedback from users are not used for continuous improvement;

| Reporting and Analysis Features      |   |
|--------------------------------------|---|
| High-impact interventions identified | Capacity building for data analytics      |
| to address the gap                   |   |
| Resources Required to get there      | Budget for Trainings                      |
| (be clear, don't be generic)         |   |
| Primary Responsible Body             | MOH, Regions and Partners                 |
| (Directorate, Agency, etc.)          |   |
| Means of Verification                | Data analytics training provided cascaded |
| Timeline (From/To or definite        | Hamile/July 2021- Sene June/2025          |
| period)                              |   |

| Gaps to be addressed #11: Limited capabilities exist to reuse collected data and resources seamlessly within the workflows |   |
|--|---|
| Data collection alignment  |   |
| High-impact interventions identified   | Capacity building on data collection process and workflow |
| to address the gap   | analysis  |
| Resources Required to get there  | Budget for workshop and trainings                         |
| (be clear, don't be generic)   |   |
| Primary Responsible Body   | MOH, Regions and partners                                 |
| (Directorate, Agency, etc.)  |   |
| Means of Verification  | Training on Workflow analysis and data collection process |
| Timeline (From/To or definite  | Hamile/July 2021- Sene June/2025                          |
| period)  |   |
